eToro gives retail investors access to the Chinese tech sector with new portfolio

Global multi-asset investment platform eToro has today launched a new ChinaTech portfolio, giving retail investors access to Chinese companies who are leading the way in technological developments such as artificial intelligence, autonomous driving, electronics and e-commerce.

With the largest population on earth, China is set to overtake the US by becoming the number one economy by GDP in 2030¹. China's technological advances are challenging the US as the world leader and it has already overtaken the Western power in the e-commerce and mobile payments sectors².

The ChinaTech portfolio comprises 30 companies, representing China's leading technology businesses with a small allocation to international companies for whom a large proportion of their revenue comes from China.

Yoni Assia, CEO and Co-founder of eToro, comments: *“Over the last decade, China has emerged as a technological superpower and leads the way in e-commerce, artificial intelligence, robotics and autonomous driving. This new portfolio gives retail investors the opportunity to invest in the companies that are the forefront of tech development.*

“Our growing range of thematic portfolios enable people to invest in ideas they understand and believe in, ranging from renewable energy, to gaming and now the Chinese technology sector.”

Clients can invest in the ChinaTech portfolio from as little as \$2,000 USD. Companies included in the portfolio are: Baidu, Alibaba, Intel Corp, Pinduoduo, Tal Education, Bilibili, Meituan Dianping and Tencent. eToro's investment office will review and rebalance the portfolio as necessary.
